Dear Hiring Manager,

I am excited to apply for a position with the Allen Brain Institute. I have worked as a professional software developer for about 25 years, and was an amateur since I was 8 years old. I heard about the Allen Brain institute when I worked with Protocase as our sister company 45 Drives did work with you. The team that went out there included Rob MacQueen whom I mentored for several years. He spoke very highly of your company and its mission.

I have always enjoyed my roles that included hardware integration and scientific exploration and research the most. I enjoy coding in many languages, including C,C++,C#, Python, Java, Jotlin, Matlab, and Rust. I also love collaborating with non-engineering teams in development, deployment, and testing of the software products I help create. There is nothing as satisfying as solving the real problem a customer or colleague has!

I have also acquired a love of good project management and working with cross-functional teams to do software architecture and hardware/ software integration on complex products.

Thank you for considering me for your role.

Sincerely,

–Douglas Ronne
